

Simon XT Panel Battery Replacement

Simon XT Talking Touch Screen (secondary touchscreen)

Power Requirements: 4 AAA alkaline batteries.

Recommended batteries: Any AAA.

Battery life: 12 hours without AC power.

Battery replacement

When the touch screen batteries are low, the touch screen will display the red battery icon on the Home and Settings screens.

Note: We recommend that you replace the batteries once a year and after any significant power outage.

1. Remove the touch screen from the mounting plate by inserting a small screwdriver into the slot on the bottom of the touch screen.
2. Replace all batteries being sure to follow the polarity instructions (replace with four 1.5 V, Alkaline AAA batteries).
3. Avoid touching the touch screen face while you are replacing the batteries.
4. Briefly disconnect the AC power (this will clear the battery fault).
5. Reconnect AC power.
